***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to a piston cylinder combination, classified in class 92, subclass 169.1.
- II. Claims 8-11, drawn to a method of honing a cylinder bore, where one of axial feed rate, speed, number of reciprocations or dwell time is changed, classified in class 29, subclass 888.06.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the cylinder can be made with a hone where the angle of the hone is changed..

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

During a telephone conversation with on a provisional election was made without traverse to prosecute the invention of species I, claims . Affirmation of this election must be made by applicant in replying to this Office action. Claims is are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

A telephone call was made to James F. McKeown on July 12, 2007 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 3745
